OpenCourseWare Project  
PHYS 101

April 2013

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Position

**Figure:** A position vector locating an object at a point  $(x, y, z)$ .

Position vector:

$$\mathbf{r} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k} \quad (\text{m})$$

$$r \equiv |\mathbf{r}| = \sqrt{x^2 + y^2 + z^2} \quad (\text{m})$$

## Example

**Question:** Find the distance between the object and the origin.

**Solution:**

**Figure:** The position vector  $\mathbf{r} = 4\mathbf{i} - 3\mathbf{j} + 4\mathbf{k}$  for an object at point  $(4, -3, 4)$ .

# Outline

- 1 Position
- 2 Displacement**
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Displacement

**Figure:** The displacement vector  $\Delta \mathbf{r} = \mathbf{r}_2 - \mathbf{r}_1$ .

## Displacement vector:

$$\begin{aligned}\Delta \mathbf{r} &= \mathbf{r}_2 - \mathbf{r}_1 \\ &= (x_2 - x_1)\mathbf{i} + (y_2 - y_1)\mathbf{j} + (z_2 - z_1)\mathbf{k} \quad (\text{m}) \\ &= \Delta x\mathbf{i} + \Delta y\mathbf{j} + \Delta z\mathbf{k}\end{aligned}$$

## Example

**Question:** Let the object in the preceding example starts to move from the initial position  $\mathbf{r}_1 = (4\mathbf{i} - 3\mathbf{j} + 4\mathbf{k})$  m, follows *some* path, and arrives at the final position  $\mathbf{r}_2 = (3\mathbf{i} + 4\mathbf{j} + 3\mathbf{k})$  m at a later time. Find  $\Delta\mathbf{r}$  and  $\Delta r$ .

**Solution:**

**Figure:** The displacement vector  $\Delta\mathbf{r}$  for a moving object.

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity**
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Average Velocity

**Figure:** The average and instantaneous velocity vectors for a moving object.

Average velocity:

$$\mathbf{v}_{\text{avg}} = \frac{\Delta \mathbf{r}}{\Delta t} = \frac{\mathbf{r}_2 - \mathbf{r}_1}{t_2 - t_1} \quad (\text{m/s})$$

## Example

**Question:** An object changes its position according to the relation

$$\mathbf{r}(t) = (t + 1)\mathbf{i} + (t^2 - 4)\mathbf{j} - t\mathbf{k}$$

where  $r$  is in meters and  $t$  is in seconds. Find its average velocity between  $t = 1$  s and  $t = 3$  s.

**Solution:**

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity**
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# (Instantaneous) Velocity

**Figure:** The average and instantaneous velocity vectors for a moving object.

$$\begin{aligned}\mathbf{v} &= \lim_{\Delta t \rightarrow 0} \frac{\Delta \mathbf{r}}{\Delta t} = \frac{d\mathbf{r}}{dt} \\ &= \mathbf{v}_x + \mathbf{v}_y + \mathbf{v}_z \\ &= v_x \mathbf{i} + v_y \mathbf{j} + v_z \mathbf{k} \quad (\text{m/s}) \\ &= \frac{dx}{dt} \mathbf{i} + \frac{dy}{dt} \mathbf{j} + \frac{dz}{dt} \mathbf{k}\end{aligned}$$

$$\text{speed: } v = \sqrt{v_x^2 + v_y^2 + v_z^2}$$

## Example

**Question:** Let the position of an object be  $\mathbf{r}(t) = (t + 1)\mathbf{i} + (t^2 - 4)\mathbf{j} - t\mathbf{k}$  with  $r$  being in meters and  $t$  in seconds. Determine the general relation for the velocity of this object. Using this, find the object's velocities and speeds at  $t = 1$  s and  $t = 3$  s.

**Solution:**

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration**
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Average Acceleration

## Average Acceleration

$$\mathbf{a}_{\text{avg}} = \frac{\Delta \mathbf{v}}{\Delta t} = \frac{\mathbf{v}_2 - \mathbf{v}_1}{t_2 - t_1} \quad (\text{m/s}^2)$$

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration**
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# (Instantaneous) Acceleration

**Figure:** The instantaneous acceleration vector for a moving object.

$$\begin{aligned} \mathbf{a} &= \lim_{\Delta t \rightarrow 0} \frac{\Delta \mathbf{v}}{\Delta t} = \frac{d\mathbf{v}}{dt} = \frac{d^2 \mathbf{r}}{dt^2} \\ &= \mathbf{a}_x + \mathbf{a}_y + \mathbf{a}_z \\ &= a_x \mathbf{i} + a_y \mathbf{j} + a_z \mathbf{k} \quad (\text{m/s}^2) \\ &= \frac{dv_x}{dt} \mathbf{i} + \frac{dv_y}{dt} \mathbf{j} + \frac{dv_z}{dt} \mathbf{k} \\ &= \frac{dx^2}{dt^2} \mathbf{i} + \frac{dy^2}{dt^2} \mathbf{j} + \frac{dz^2}{dt^2} \mathbf{k} \end{aligned}$$

**Magnitude:**

$$a = \sqrt{a_x^2 + a_y^2 + a_z^2} \quad (\text{m/s}^2)$$

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration**
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Tangential and Radial Accelerations

**Figure:** An acceleration vector  $\mathbf{a}$  decomposed into its tangential,  $\mathbf{a}_t$ , and radial,  $\mathbf{a}_r$ , components.

## Tangential Acceleration

$$a_t = \frac{dv}{dt}$$

## Radial Acceleration

$$a_r = \frac{v^2}{r}$$

## Example

**Question:** The position of the bus is

$$\mathbf{r}(t) = \left(-\frac{1}{10}t^3 + 2t^2 - 10t\right)\mathbf{i} + \left(-t^2 + 2t + 12\right)\mathbf{j}$$

where  $r$  is in kilometers and  $t$  is in hours. Find the kinematic quantities of the bus at  $t = 2$  h.

**Solution:**

**Figure:** The position and velocity vectors of the bus at  $t = 2$  h.

# Example (cont.'d)

## Solution (cont.'d):

**Figure:** The velocity and acceleration vectors of the bus at  $t = 2$  h.

  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Motion with Constant Acceleration in a Plane: Projectile Motion

## Components of Acceleration, Velocity, and Position Vectors

$$a_x = 0$$

$$v_x = v_{x0}$$

$$x = x_0 + v_{x0}t$$

$$a_y = -g$$

$$v_y = v_{y0} - gt$$

$$y = y_0 + v_{y0}t - \frac{1}{2}gt^2$$

$$v_y^2 = v_{y0}^2 - 2g(y - y_0)$$

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration**
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion**
- 8 Uniform Circular Motion

# Example: Symmetric Projectile Motion

**Figure:** A symmetric projectile motion.

## Parabolic Trajectory

$$y = (\tan \theta_0) x - \left( \frac{g}{2v_0^2 \cos^2 \theta_0} \right) x^2$$

## Maximum Altitude

$$h_{\max} = \frac{v_0^2 \sin^2 \theta_0}{2g}$$

## Horizontal Range

$$R = \frac{v_0^2}{g} \sin 2\theta_0$$

# Derivations of $y$ , $h_{\max}$ , and $R$

# Example: Symmetric Projectile Motion(cont.'d)

## Complementary Angles (Example)

**Figure:** Two complementary initial angles lead to the same horizontal range  $R$  for a symmetric projectile motion.

# Outline

- 1 Position
- 2 Displacement
- 3 Average Velocity
- 4 (Instantaneous) Velocity
- 5 Average Acceleration
- 6 (Instantaneous) Acceleration
  - Tangential and Radial Accelerations
- 7 Constant Acceleration
  - 3D Consideration
  - Projectile Motion
  - Symmetric Projectile Motion
- 8 Uniform Circular Motion

# Uniform Circular Motion

**Figure:** An object undergoing a uniform circular motion.

Radial (centripetal)  
acceleration

$$a = a_r = \frac{v^2}{r}$$

Period of a uniform circular  
motion

$$T = \frac{2\pi r}{v} \quad (\text{s})$$

# Uniform Circular Motion (cont.'d)

**Derivation of  $a = a_r = v^2/r$ :**

**Figure:** Figures for the derivation of  $a = a_r = v^2/r$ .
